

# Master Data Management (Computerized Systems) – Routine Support

Zamann Pharma Support provides ongoing assistance to pharmaceutical companies in maintaining and optimizing their Master Data Management processes for Computerized Systems. This service ensures the accuracy, integrity, and reliability of critical data used in various systems, contributing to regulatory compliance and operational efficiency

## Data Quality Monitoring and Maintenance

Regularly monitor Master Data quality to identify discrepancies, errors, or inconsistencies. Implement data cleansing and enrichment activities to ensure data accuracy and completeness, leveraging automated tools and manual review processes as needed.

## System Configuration and Optimization

Assist in configuring and optimizing computerized systems to support efficient master data management processes. Collaborate with IT teams to define data structures, establish data hierarchies, and configure data validation rules to maintain data integrity and consistency.

## User Training and Support

Provide training sessions and user support to educate personnel on master data management best practices, system functionalities, and data entry protocols. Offer guidance on data governance principles, data maintenance procedures, and troubleshooting techniques to empower users in effectively managing master data.
