

Access Management (Computerized Systems) – Routine Support

We provide ongoing assistance to manage User Access to computerized systems. This service ensures that appropriate access controls are implemented, maintained, and monitored to protect system integrity, confidentiality, and data security

User Access Administration

Manage user accounts, roles, and permissions within computerized systems according to predefined access control policies and procedures. This includes creating new user accounts, assigning appropriate access rights, and updating user profiles as needed.

Access Control Monitoring

Regularly monitor user access activities and permissions within computerized systems to detect any unauthorized access attempts or anomalies. Conduct periodic access reviews and audits to ensure compliance with access control policies and regulatory requirements.

User Training and Support

Provide training and support to system users on access management procedures, password policies, and security best practices. Educate users on the importance of safeguarding access credentials and adhering to access control protocols to mitigate security risks.

User Access Administration:

- Manage and update user accounts and permissions according to policy.

Access Control Monitoring:

- Monitor user activities and conduct audits to ensure policy compliance.

User Training and Support:

- Train users on security practices and importance of safeguarding credentials.
