

# Computerized Systems Validation – Execution

Zamann Pharma Support GmbH offers comprehensive support for the execution phase of Computerized Systems Validation (CSV) in the pharmaceutical industry. Our expert team ensures the smooth and efficient implementation of validation activities, adhering to regulatory requirements and industry best practices

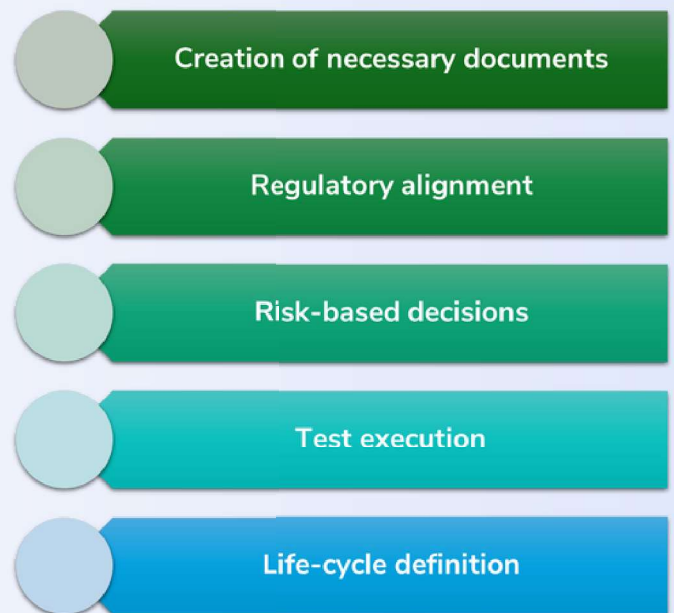

## Validation Protocol Execution

Our team ensures the execution phase of CSV, we meticulously follow the protocols, documenting each step and any deviations encountered.

## Testing and Verification

We conduct thorough functional testing to verify that the system meets all specified requirements and functions as intended. Our team performs user acceptance testing (UAT) to validate that the system meets end-user needs and expectations.

Additionally, we conduct regression testing to ensure that system changes or updates have not adversely affected existing functionality.

## Documentation and Reporting

We generate detailed documentation throughout the execution phase, including test scripts, test results, and traceability matrices.

Our team meticulously records any deviations or discrepancies encountered during testing and verifies that appropriate corrective actions are taken.

We prepare comprehensive validation reports summarizing the execution activities, results, and compliance status, providing stakeholders with a clear understanding of the validation process and outcomes.
