

Knowledge Management – GAP Assessment

Our service identify and address GAPS between their existing knowledge management processes and the regulatory requirements outlined by authorities such as FDA, EMA, and WHO. We conduct comprehensive assessments to evaluate the effectiveness, compliance, and maturity of current knowledge management practices, identifying areas for improvement and alignment with industry standards

Current State Assessment

We conduct a detailed analysis of the organization's current knowledge management processes, including documentation, workflows, systems, and practices.

This involves reviewing existing policies, procedures, SOPs, tools, and technologies to identify strengths, weaknesses, and potential gaps in compliance with regulatory requirements.

Regulatory Compliance Review

We assess the organization's knowledge management practices against relevant regulatory guidelines and standards, including FDA, EMA, and WHO requirements.

This involves comparing existing processes and documentation with regulatory expectations, identifying areas of non-compliance or deviation, and determining corrective actions needed for alignment.

GAP Analysis and Recommendations

Based on the assessment findings, we perform a comprehensive gap analysis to identify discrepancies between current practices and regulatory requirements.

We provide detailed recommendations and action plans to address identified gaps, including updates to policies, procedures, systems, and training programs, aiming to enhance compliance, efficiency, and effectiveness in knowledge management.
