

Labware LIMS – Master Data Mapping

We provide consultancy services for Labware LIMS - Master Data Mapping, ensuring a comprehensive review of the company's Master Data integrated into the Labware LIMS database. The service focused on identifying errors in implemented Master Data, evaluating alignment with business and regulatory requirements, and proposing corrective actions to address any identified GAPS. This meticulous approach ensured data consistency, compliance, and enhanced system reliability, ultimately improving overall process efficiency

Comprehensive Master Data Evaluation

Conducted a detailed review of all Master Data elements stored within the Labware LIMS database. Verified data against defined specifications, industry regulations, and operational workflows to identify inconsistencies, inaccuracies, or outdated records.

GAP Analysis and Root Cause Identification

Performed a systematic GAP analysis to pinpoint discrepancies between the current state of Master Data and the company's operational needs or regulatory standards. Investigated root causes for identified issues, including incorrect data entry practices or insufficient standardization protocols.

Action Plan Development and Corrective Actions Proposal

Developed a detailed corrective action plan addressing each identified GAP. Proposed data corrections, standardization strategies, and long-term recommendations to maintain data integrity, such as implementing validation processes and periodic data reviews.
